Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Claim 2 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3-5 and 7-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Lotz. Lotz discloses an interleaver having a substrate jam detector that includes first (20) and second (22) conveyors; a substrate feed mechanism (24); a fiber optic jam detector (222); a product detector (156); a perforator (84); an acceleration roller (116); and a controller (34). An alarm occurs when a jam is detected (starting of roll 26) and upstream equipment (28) is turned off.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3651

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lotz in view of Kotsiopoulos. Lotz discloses all the limitations of the claim, but it does not disclose that the sensor is located between the perforator and the acceleration roller. However, Kotsiopoulos discloses a similar device that includes a sensor (62) located immediately in front of an acceleration roller (48) for the purpose of controlling the feed of material to the acceleration roller. It would have been obvious for a person of ordinary skill in the art at the time of the applicant's invention to modify Lotz by placing the sensor immediately in front of the acceleration roller, thus between the perforator and the acceleration roll, as disclosed by Kotsiopoulos, for the purpose of controlling the feed of material to the acceleration roller.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
